Problem Statement : [Professional Track] AI for Rural Innovation & Sustainable Systems

**KrishiSaathi**

AI-Powered Multi-Agent Agricultural Intelligence

ABOUT THE IDEA

Brief About the Idea — Why AI is Required

Bridging the agricultural knowledge gap for 120M+ Indian farmers through multi-agent AI and voice-first multilingual design

The Problem

- ✗ **120M+ farmers** lack timely access to expert agricultural guidance
- ✗ Information on diseases, prices, schemes is **fragmented across platforms**
- ✗ **Language barrier** — most solutions are English-only; farmers speak 22+ languages
- ✗ **Low digital literacy** — complex apps are unusable for rural farmers
- ✗ **No personalization** — generic advice ignores local soil, weather, crop context
- ✗ **Delayed response** — crop diseases spread while waiting for expert visits

Our Solution: KrishiSaathi

- ▶ **Multi-Agent AI** — 5 specialist agents orchestrated by a Supervisor Agent
- ▶ **Voice-first design** — speak in any Indian language, hear back in the same
- ▶ **RAG-powered knowledge** — 50K+ verified agricultural documents for accurate answers
- ▶ **Persistent memory** — remembers farmer context for personalized advice
- ▶ **Real-time data** — live weather, market prices, and scheme updates
- ▶ **AWS-native architecture** — Bedrock, Polly, Transcribe, RDS, EC2

WHY AI IS REQUIRED

Traditional approaches cannot solve this at scale

AI enables real-time, personalized, multilingual agricultural guidance at a cost of **₹0.50/query** vs. ₹500+ for an in-person expert visit. Multi-agent architecture provides specialized domain expertise that no single model can match. RAG ensures factual accuracy while LLMs provide natural conversation.

AI Disease Diagnosis

Instant crop disease identification from text/images. Treatment plans with costs and recovery timelines — no waiting for expert visits.

Bedrock Vision

Contextual Memory

Mem0-inspired memory engine learns farmer's crops, location, soil type — making every interaction more personalized over time.

AI-Powered Multi-Agent Agricultural Intelligence

CORE REQUIREMENT

Why AI is Required in Our Solution

AI isn't an add-on — it is the fundamental enabler. Without AI, this problem is unsolvable at India's scale.

India has 120M+ farmers but only ~67,000 agricultural scientists

That's **1 expert per 1,800 farmers**. Physical expert visits cost ₹500+ and take days. Meanwhile, crop diseases spread in **24–48 hours**. Only AI can deliver instant, expert-quality, multilingual guidance at ₹0.50/query — a **1,000x cost reduction**.

1000x
COST REDUCTION

WHY ONLY AI CAN BRIDGE THIS

Without AI

- ✗ **Days-long delay** — farmers wait 3–7 days for expert field visits
- ✗ **English-only tools** — 85% of farmers can't use existing platforms
- ✗ **Generic advice** — no awareness of local soil, weather, crop history
- ✗ **No disease diagnosis** — visual identification needs trained plant pathologists
- ✗ **Fragmented data** — weather, schemes, prices scattered across 50+ portals
- ✗ **₹500+ per visit** — unaffordable for smallholder farmers earning ₹6,000/month
- ✗ **Zero scalability** — cannot serve 120M farmers with 67K experts

Scale Problem

Serving 120M farmers simultaneously is a **machine-only task**. No human workforce can match 1M+ concurrent queries at ₹0.50 each.

Bedrock + Multi-Agent

Speed Requirement

Crop diseases spread in 24h. AI delivers **diagnosis in 2–3 seconds** with treatment plans — impossible via human consultation.

Real-Time Inference

Language Barrier

Natural conversation in **12 Indian languages** requires NLU + neural TTS — no static translation can understand farmer queries.

Polly + Transcribe + LLM

Context Reasoning

5 specialist agents reason over soil + weather + market + scheme data simultaneously — no rule-based system can handle this.

Multi-Agent Orchestration

With KrishiSaathi AI

- ✓ **2–3 sec response** — instant answers via Bedrock LLM + RAG pipeline
- ✓ **12 languages** — voice-first interface in farmer's mother tongue
- ✓ **Personalized advice** — memory engine tracks crops, soil, location, history
- ✓ **AI crop doctor** — text/image-based disease diagnosis with treatment plans
- ✓ **Unified platform** — 5 agents synthesize weather, market, schemes, soil data
- ✓ **₹0.50/query** — affordable for every farmer, powered by AWS Bedrock
- ✓ **Infinite scale** — serves 120M farmers concurrently via cloud-native AI

AI-Powered UX

USER EXPERIENCE

What Value the AI Layer Adds to User Experience

AI transforms fragmented agricultural data into personalized, voice-first, multilingual guidance that any farmer can use

✗ WITHOUT AI

Traditional Experience

- ✗ Wait days for expert visit
- ✗ English-only apps unusable
- ✗ Generic one-size-fits-all advice
- ✗ Manual mandi price search
- ✗ Complex scheme eligibility forms
- ✗ No memory of past interactions
- ✗ Text-only, excludes illiterate
- ✗ Fragmented across 10+ apps

✓ WITH KRISHISAATHI AI

AI-Enhanced Experience

- ✓ Instant expert response in 3-5 sec
- ✓ Voice-first in 12 Indian languages
- ✓ Personalized to your farm context
- ✓ AI finds best mandi automatically
- ✓ Auto-eligibility for 200+ schemes
- ✓ Remembers crops, soil, location
- ✓ Voice input & audio responses
- ✓ One platform, 5 specialist agents

AI-Powered UX Enhancements

How AI transforms every interaction into actionable intelligence

Voice-First Design

Speak in your language → AI understands → responds in audio. Amazon Polly neural TTS + Transcribe STT make this seamless.

Contextual Memory

AI remembers your crops, location, soil type across sessions. Each conversation gets smarter with 10 memory categories.

Visual Crop Diagnosis

Upload a photo → Bedrock Vision identifies disease → treatment plan with cost estimates and recovery timeline.

Smart Market Insights

AI analyzes price trends across mandis, recommends best selling time and location to maximize farmer income.

Auto Scheme Matching

AI checks eligibility across 200+ schemes instantly. Provides step-by-step application guidance with document checklist.

Multi-Agent Orchestration

Supervisor routes queries to the right specialist agent. Complex questions get multi-agent synthesized responses.

Live Application Screenshots

All screenshots from the live deployment at <https://krishisaathi.shashi.engineer> — Replace these mockups with actual screenshots

AI Chat Interface

Page 1

The mockup shows a web browser window with the URL 'krishisaathi.shashi.engineer'. The page has a dark header with the KrishiSaathi logo and tagline. Below the header, there's a chat interface with a green 'KrishiSaathi' logo and the text 'AI-Powered Multi-Agent Agricultural Intelligence'. The chat area contains a message from the user: 'Hello, how are you?' and a response from the AI: 'Hello, I'm doing well, thank you for asking. I'm here to help you with any questions or concerns you may have about your farm. How can I assist you today? What's been going on with your crops in Telangana?'. There are 'Listen' and 'The' buttons, and a text input field at the bottom with the placeholder 'Type your farming question here...'.

Crop Doctor

Page 2

The mockup shows a web browser window with the URL 'krishisaathi.shashi.engineer/Crop_Doctor'. The page has a dark header with the 'Crop Doctor' title. Below the header, there's a section for 'Diagnosis Results' with a list of 5 items: 1. Disease Name: Bacterial Spot of Tomato; 2. Severity: Moderate; 3. Effect: Causes necrotic lesions; 4. Treatment: Remove and destroy; 5. Prevention: Use resistant varieties. To the left of the text is a photo of a green tomato with dark, necrotic spots.

Market Prices

Page 3

The mockup shows a web browser window with the URL 'krishisaathi.shashi.engineer/Market_Prices'. The page has a dark header with the 'Market Prices' title. Below the header, there's a 'Market Prices Dashboard' with four large boxes showing 'Crop Index' (17), 'Disease Index' (13), 'Input Price' (₹14,500), and 'Output Price' (₹15). Below these is a table titled 'Current Mandi Prices' with columns for 'Crop', 'Market', 'Price', 'Unit', and 'Date'. The table lists prices for various crops like Rice, Wheat, and pulses across different markets.

Government Schemes

Page 4

The mockup shows a web browser window with the URL 'krishisaathi.shashi.engineer/Government_Schemes'. The page has a dark header with the 'Government Schemes' title. Below the header, there's a section for 'Government Schemes' with a list of 4 items: 1. Scheme Name: Pradhan Mantri Kisan Samriddhi Yojana; 2. Amount: ₹10,000 per acre per year; 3. Status: Active; 4. Action: View Details. Below the list is a table with columns for 'Scheme Name', 'Amount', 'Status', and 'Action'.

Weather Intelligence

Page 5

The mockup shows a web browser window with the URL 'krishisaathi.shashi.engineer/Weather'. The page has a dark header with the 'Weather Intelligence' title. Below the header, there's a section for 'Weather & Crop Advisory' with a '5-Day Weather Forecast - Hyderabad' showing temperature and humidity trends. Below the forecast is a bar chart showing 'Monthly Rainfall (mm)' for the last 12 months.

Admin Dashboard

Page 7

The mockup shows a web browser window with the URL 'krishisaathi.shashi.engineer/Admin'. The page has a dark header with the 'Admin Dashboard' title. Below the header, there's a section for 'Admin Dashboard' with a 'Key Metrics' table showing 'Total Messages' (7), 'Total Reminders' (27), 'Registered' (12), 'Telegram Users' (7), and 'Admin Users' (2). Below the table is a bar chart showing 'Messages Per Day (last 30 days)'.
